

Introduction

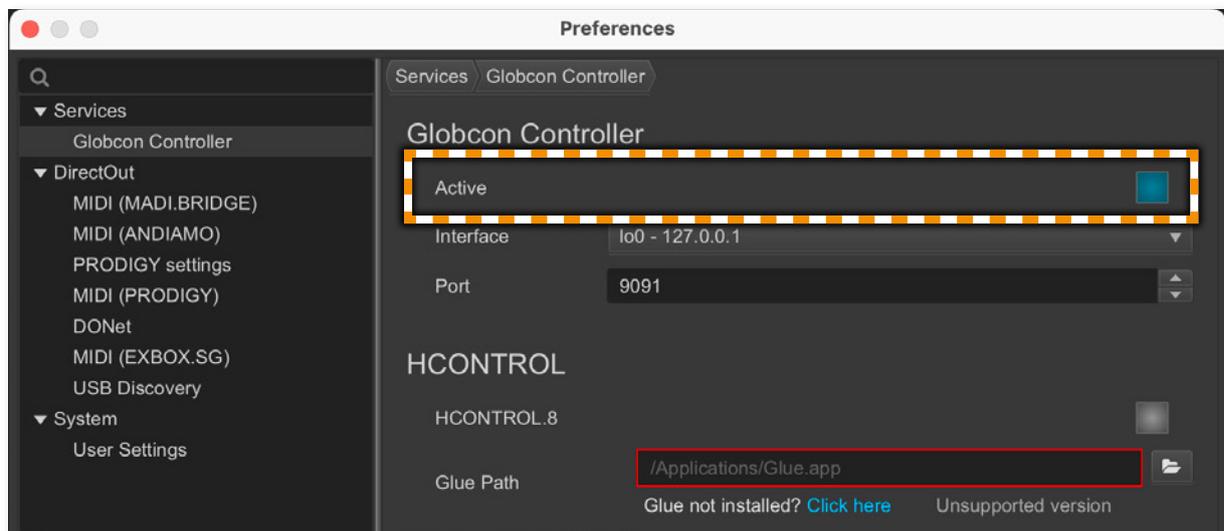

The operation of HCONTROL requires the installation of the software globcon and glue. This documents guides you through the necessary steps of the installation process.

Requirements

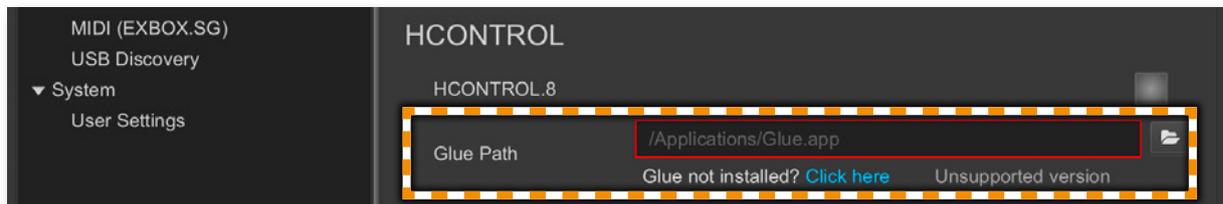

- Computer with Windows 10 or 11 or macOS 10.15 or higher
- Administrator privileges
- USB-C cable to connect HCONTROL with computer
- Ethernet cable to connect HCONTROL with network (requires successful USB-installation first)

Installation - USB control

1. Download globcon software:
<https://www.directout.eu/product/hcontrol-8/>
2. Install globcon
3. Open globcon - Settings / Preferences
⇒ Services / Globcon Controller and
⇒ activate 'Globcon Controller' (blue check box)

4. Install Glue software (globcon - Settings / Preferences - Services)

NOTES

To ensure that the correct version of glue is installed on the system follow the link ('Click here') from globcon only.

At the end of the installation process you must uncheck the option 'Run Glue after Installation'. Glue needs to be started from the globcon preferences panel.

5. Check installation path of glue and activate HCONTROL (blue check box)

6. Connect USB-C cable with computer

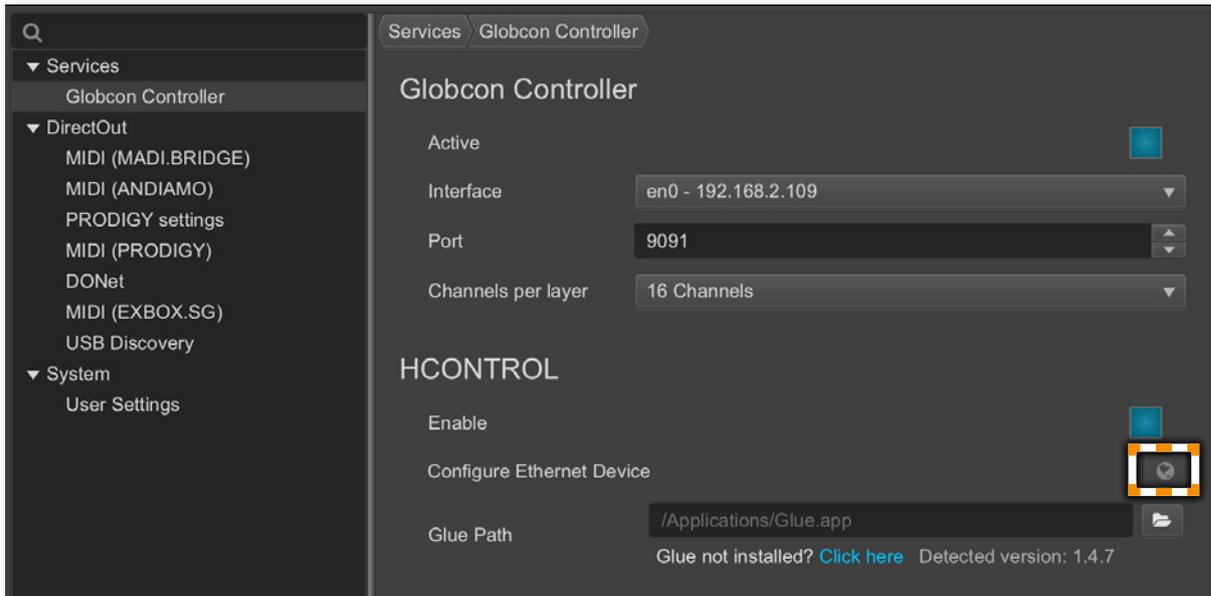

7. Connect power supply to HCONTROL

8. Switch-on HCONTROL

Installation - Network Control

After you have successfully connected HCONTROL to your globcon instance via USB, you can change the connection type from USB to Ethernet.

1. Select globcon - Settings / Preferences from the menu bar.
 - ⇒ Services / Globcon Controller / HCONTROL
 - ⇒ Click the 'globe' icon to open the browser display

2. A browser window will open showing all controllers which had been connected to globcon. The controller which is currently connected via USB is showing up green.
 - ⇒ Click the 'gear' icon to open the IP settings of the controller.

Controller Status			
Controller	Connection Type	(IP) Address	Status
● A2 (WGM6LY)	USB	/dev/tty.usbmodem2201	OK ⚙️
● HCONTROL.8	USB		Not Connected 🗑️
● HCONTROL.8	USB	/dev/tty.usbmodem83101	Not Connected 🗑️
+ Add Controller with IP Address			

3. Adjust the IP settings of the controller to your requirements.
⇒ Click 'Save'

Controller Network Settings

Mode DHCP Static

Static IP: 192.168.2.181

Subnet Mask: 255.255.255.0

Gateway: 0.0.0.0

Buttons: Cancel, Save

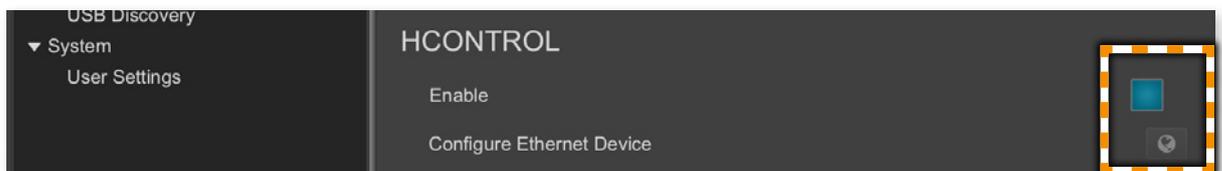

4. Now you can disconnect the USB cable between HCONTROL and your computer.

NOTE

Priority: If USB is connected the ethernet port will be inactive.

5. Switch-off HCONTROL hardware controller.
6. Open Settings / Preferences from the menu bar.
⇒ Services / Globcon Controller
⇒ Deactivate HCONTROL (blue check box)
⇒ Click 'Apply'

7. Activate HCONTROL again
⇒ Click 'Apply'
8. Click the 'globe' icon to open the browser display to see connected controllers.
9. Switch-on HCONTROL hardware controller.

- 10.** The browser window showing the Controller Status should display now a generic MPX Controller which has the assigned IP address.
 ⇒ Select '+ Use this Controller' on the right.

Controller	Connection Type	(IP) Address	Status	
A2 (VAGQW8)	USB	/dev/tty.usbmodem83301	Not Connected	
HCONTROL.8	USB		Not Connected	
HCONTROL.8	USB	/dev/tty.usbmodem83101	Not Connected	
MPX Controller	Ethernet	192.168.2.181:42600	Found on the Network, not connected	+ Use this Controller

[+ Add Controller with IP Address](#)

- 11.** The IP controlled hardware will be mapped to the local instance of globcon.

Controller	Connection Type	(IP) Address	Status	
A2 (WGM6LY)	Ethernet	192.168.2.181:42600	OK	
HCONTROL.8	USB		Not Connected	
HCONTROL.8	USB	/dev/tty.usbmodem83101	Not Connected	

[+ Add Controller with IP Address](#)

Status LED - Connection Modes

A status LED at the rear side displays the different connection modes:

LED code		Mode
	Red - blinking	USB - connected to computer, no host connected yet
	Red - solid	USB - connected to host
	Blue - blinking fast	IP active (= no USB connected) - waiting for DHCP
	Blue - blinking slow	IP active (= no USB connected) - IP address is set (DHCP has responded or manual IP assigned) no host connected yet
	Blue - solid	IP mode active (= no USB connected), host connected

It works...

Once everything is installed and running your HCONTROL should look like this.
